If you were growing a garden why would it be helpful for you to have Earthworms in your soil.

- They eat the dead leaves around the plant
- The Earthworms ~~recycle~~ ^{waste} help the plants to grow
- Eat the ~~weeds~~ ^{weeds}
- fertilization
- Compose

Mrs. Veltri Poop
 Margus Soil fresh
 Terrance Soil refresh
 Dierra to kill them
 Schmar fertilize soil
 Brandon to get bad stuff out soil

Jakeria to keep a health garden

Gloria - Dead leaves so cranking the plants

Jordan - pure to the earth

Khalil - Recycle soil & sooo

Ashley ~~ANPE~~ Eat the dirt means not fresh

Ashley - they slimy

Audrey - tunnels in the ground for water

Tomeri - help the plant grow

Jacob - Bacteri

~~scribble~~

April 13, 2016

- It might be helpful to have earthworms in your garden because the earthworms help eat away some of the things that harms the life of the plants and also it makes the dirt more healthy for plant growth.

ble ^{ner} poop, ^{fresh} fresh, ^{soil} refresh, ^{dearen} step on them, ^{stano} fertil, ^{Bardon} get the bad stuff out,
healthy garden, eat the dead leaves, ^{to} pure the earth,
recycle food scraps, eats the dirt that's not fresh, they ^{at} sting,
they make tunnels

~~XXXXXXXXXX~~

It would be helpful b/c earth worms would eat the dirt. They would get rid of dirt that no longer has the nutrients the plant need to survive.

Also their excrements would give nutrients to the soil with which the plants use.

Earthworms move around and release CO_2 left in the soil.

They make tunnels in the ground which allows water to flow through the ground to the plants.

~~Earthworms~~

4-13-16

If you were growing a garden, why would it be helpful for you to have earthworms in your soil?

- They eat dirt.
- They are slimy
- They are long
- To eat the dead leaves
- They are pure to the earth
- They make holes for water to come down
